Education

Chennai Mathematical Institute — Chennai, India
Master of Science in Theoretical Computer Science (On Full Scholarship) — *Aug. 2026 – Discontinued*

Kirori Mal College, University of Delhi — Delhi, India
Bachelor of Science (Honours with Research) in Mathematics, Minor in Economics — *Nov. 2022 – May 2026*

Experience

Data Engineer — Mar. 2023 – Present
Freelance & Fractal — *Remote*

- Delivered 10+ production web and data applications for client businesses via Upwork and Fractal, specializing in data engineering pipelines, backend API architectures, and automated testing.
- **Order Procurement & Management Solution** | *Python, SQL, PostgreSQL, NextJS, TypeScript*
  - Deployed an enterprise order portal using NextJS, TypeScript, and PostgreSQL with RESTful APIs, session authentication, and audit logging for 120+ monthly orders.
  - Designed a dual-tier analytics interface with a customer ordering portal and an administrative dashboard featuring real-time inventory tracking, staff task dispatch, and recurring schedule workflows.
  - Developed a batch ETL/ELT data ingestion pipeline parsing incoming message streams into structured PostgreSQL tables with validation checks, eliminating manual entry.
  - Designed relational PostgreSQL schemas with B-tree indexing and integrity constraints to handle transactional queries across 50,000+ records.

Computer Vision Engineer — Oct. 2023 – Apr. 2025
Tagglabs Experimental Pvt. Ltd. (Contract) — *Gurugram, Haryana (Remote)*

- **Cross-platform AR App** | *Python, OpenCV, C++, Django, SQL* **(Live link)**
  - Architected a native C/C++ bridge using `dart:ffi` to port OpenCV Scale-Invariant Feature Transform (SIFT) feature extraction algorithms into Flutter for cross-platform computer vision across Android and iOS.
  - Engineered a real-time video stream processing pipeline that normalized OS frame buffers, converting raw video frames into C data structures with zero memory leaks at 30+ FPS.
  - Implemented feature matching and object recognition routines using statistical feature descriptors, transmitting match coordinates asynchronously to render real-time UI overlays.
  - Built RESTful backend APIs in Django with Python to process location-aware spatial discovery data, powering responsive cross-platform mobile interfaces for alpha launch.
- **Kia National Conference App** | *Python, SQL, REST APIs*
  - Orchestrated real-time data ingestion workflows for an event application serving 500+ attendees at the Kia National Conference in Bangkok, automating registration and venue routing.

Technical Skills

Data Science & Analytics: Python, SQL, R, Statistical Modeling, Predictive Analytics, Feature Engineering, NumPy, Pandas, Scikit-learn, Seaborn, Matplotlib
Data Engineering & Cloud: ETL/ELT, Data Pipelines, PySpark, PostgreSQL, REST APIs, Docker, AWS, Git, Linux, Bash
AI & Generative AI: LLMs, Agentic AI, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Prompt Engineering, n8n
Computer Vision & Frameworks: OpenCV (SIFT), C++, C, Django, NextJS, ExpressJS, TypeScript, Flutter

Achievements

Erasmus Mundus Joint Master MATHS-DISC Fellowship — Europe
Issued by European Union and affiliated universities — *Mar. 2026*

Master in Mathematics (ISI) and MSc Computer Science (CMI) Scholarships — India
Indian Statistical Institute and Chennai Mathematical Institute respectively — *Jun. 2026*

Publications

Computable Analysis: Mathematical Foundations and Computability of Real Functions
Poincare Journal of Mathematical Physics & Applications, Vol. 1, No. 1 (2026), 1–20 (with Sujit Kumar)
